SRE = Site Reliability Engineers.

I am eating eating apple.

I	-1
am	-1
eating	-2
apple	-1

Dynatrace → observability tool.

Monitoring → Reactive Approach.

observability → Proactive Approach.

① Metrics → Single Numeric Data / Good condition → CPU = 80%.

② logs → Timestamp, more details.

③ Traces → Info. about the req. flow.

End to end Visibility:-

① Application Performance Monitoring (APM)

② Database visibility,

③ Container Monitoring

④ K8s (Real user monitoring)

⑤ Synthetic Monitoring

→ End User monitoring,

① Datas.   
 ② APM   
 ③ Policy

- ④ Real time
- ⑤ Synthetic Monitoring
- ⑥ Cloud Monitoring

- ① New Relic
- ② APM
- ③ New Relic

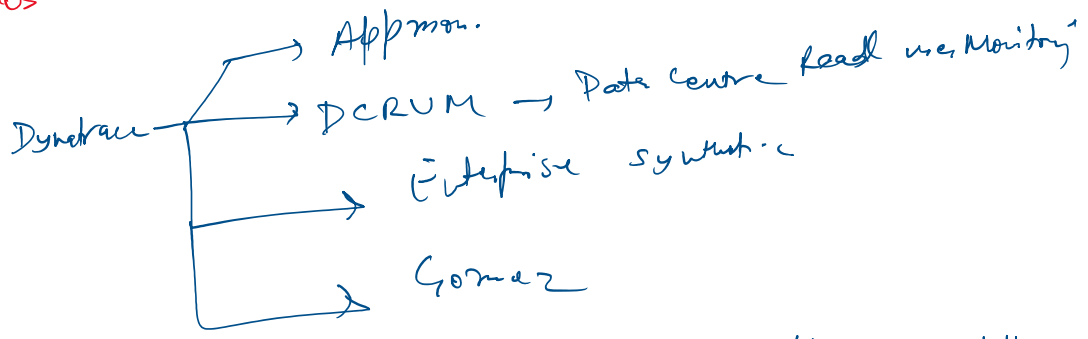

Managed Bot Synthetic

- ① Managed -> PaaS
- ② SaaS - Software As a Solution

New Relic - No Managed option. Only SaaS version Available.

Accused by company called Redix, combine all app mon.

Dynatrace SaaS architecture

One Agent -> it is not dependant on the App. It only depend OS.

- ① nginx. → Reverse Proxy server.
  - ② Elastic Search. → engine that will help to analyze the data.
  - ③ Cassandra hypercube → Distributed DB where it will store your data.
  - ④ DT Server → Collecting, processing of data Hadoop
  - ⑤ Embedded Active Gate → Lightweight Active gate, that collect the local data at DT.
- Proxy Server. → Forward Proxy Server.  
 → Reverse Proxy Server.

① Private Synthetic Monitoring

- ① Private App.
- ② Pull the cloud logs.
- No Active Gate req. in Managed env.

## Mission Control:-

- ① licence.
- ② upgrade availability
- ③ Health check of your infra.

## Dynatrace SaaS Architecture

## H/W config:-

- ① Micro - 50 node - 1000 Peak - 4 CPU - 504B RAM - 300GB Disk
- ② Small - 300 node - 10,000 users - 8 CPU, 644B RAM
- ③ Medium - 600 node - 20K users - 16 CPU, 644B RAM
- ④ Large - 1250 node - 50K users - 32 CPU - 256GB
- 2,000 node - 100,000 users - 64 CPU, 512GB RAM

- ④ large -  
⑤ x large - 2500 node - 100000
